SPECIAL FEATURE MMRT

The TITAN series autoloaders feature the **Multi-Master Recognition Technology (MMRT)**. Traditionally, autoloaders can only handle one duplication job at a time & additional manpower is needed to load a new duplication job (ex. Load new master disc, insert more blank discs, etc.)

Now, with this totally **revolutionized auto-master recognition technology**, the TITAN series can handle multiple duplication jobs per run by itself. For example, if you want to make 30 copies of job A, 50 copies of job B, & 20 copies of job C. Traditional autoloaders will only process one job per run & need someone to load job B and job C to the autoloader. However, with the TITAN series featuring MMRT, it will process all three jobs sequentially per run by itself, without the need to load & reload additional master discs. This process affords the user more time to dedicate to other matters rather than keeping a constant eye on the autoloader.

(1) The power supply will differ based on the number of target. (2) Range of speed determined by the writer drive used and the blank media writing speed.
